Profile

Junior Front-End Developer experienced in designing and developing immersive user applications using the latest front-end frameworks. Specialized in Javascript and React and passionate about personal growth and software development.

I am eager to join a team where I can contribute and continue to expand my knowledge to find solutions for customers that are better than what they expected.

Qualifications

Springboard 800-hour software engineering course

Completed a comprehensive software engineering bootcamp, covering a wide range of topics including front-end and back-end web development, modern JavaScript, testing, data structures and algorithms, and developer fundamentals.

Experience

Promptopia application https://promptopia-2.vercel.app/

Developed a Full Stack application utilizing Next.js, with seamless integration of a MongoDB database. Implemented multiple API endpoints with complete CRUD capabilities. Employed Tailwind CSS for responsive styling, ensuring optimal user experience across devices. Integrated nextAuth for secure Google sign-in authentication. Successfully deployed the application using Vercel hosting platformCryptoBase application

Crypto application https://crypto-knochen.web.app/

Built a Full Stack application using React with a Firebase backend. Implemented user sign up and sign in functionalities. Integrated API calls to fetch up-to-date cryptocurrency market data. Styled the application responsively using Tailwind CSS. Utilized React Router for seamless navigation. Included a Dark Theme option for enhanced user experience.

Skills

HTML5	CSS3	JavaScript
Databases	OOP	React
Analytical Thinking	Resolving Technical Issues	Teamwork
Adaptability	Testing	Algorithms
Git	GitHub	Data Structures
